Psychology Arousal: Catastrophe Theory The Catastrophe theory is a development of the Inverted U theory. In Inverted U theory, there is a steady fall-off in performance following over-arousal. the Catastrophe theory however is a theory of arousal that predicts a rapid decline in performance resulting from the combination of high cognitive anxiety and increasing somatic anxiety.

Catastrophe Theory by Dylan Guinnane on Prezi Transcript of Catastrophe Theory. Catastrophe. Theory To get over the catastrophe the performer must return to a level of arousal that was present before the arousal occurred. Can only take a small amount of arousal to reach this point, however it can have a huge affect upon performance. Catastrophe Model - PE Revision If cognitive anxiety is high, the increases in arousal pass a point of optimal arousal and a rapid decline in performance occurs (the catastrophe). It would be very difficult to recover from this point. The theory takes into account that anxiety (negative reaction of performer to stress) can be of two types:. Catastrophe Theory - Exploratorium Catastrophe Theory. Originated by the French mathematician Rene Thom in the 1960s, catastrophe theory is a special branch of dynamical systems theory. It studies and classifies phenomena characterized by sudden shifts in behavior arising from small changes in circumstances.
